Project Description

This project is for a class named ENSE 374, a course on software engineering management with the University of Regina. We have been tasked with creating a small-medium scale web-based application on any topic of our choosing.

Our Idea and "Why"

Our team has decided to make an app that makes it easier for people to get the information they need about recycling. Generally, people have good intentions when it comes to recycling, but often do not know how, and don't bother learning. Due to this, we see the need for an all in one information application, where users can go to find what they're looking for, from a trustworthy source.

Recycling is extremely necessary for the success of our species moving forward. Without it, waste buildup would get out control and result in an inhabitable planet for us. By recycling, we are helping to eliminate this risk, while contributing to other issues such as pollution in general, and climate change. Without a healthy planet, we have no future. For this reason, our group sees this project as an opportunity to do something worthwhile. An app that encourages more people to start recycling through its ease of use, is something that we can make, which has the potential to make a difference.

Ultimately the reason "why" we have chosen this idea, is to raise awareness and do something about the urgent global issues we are facing. Doing something worthwhile, and growing as software engineers at the same time, is truly an opportunity we could not refuse.

FAQ

What is Lorem Ipsum?
Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book. It has survived not only five centuries, but also the leap into electronic typesetting, remaining essentially unchanged. It was popularised in the 1960s with the release of Letraset sheets containing Lorem Ipsum passages, and more recently with desktop publishing software like Aldus PageMaker including versions of Lorem Ipsum.

Why do we use it?
It is a long established fact that a reader will be distracted by the readable content of a page when looking at its layout. The point of using Lorem Ipsum is that it has a more-or-less normal distribution of letters, as opposed to using 'Content here, content here', making it look like readable English. Many desktop publishing packages and web page editors now use Lorem Ipsum as their default model text, and a search for 'lorem ipsum' will uncover many web sites still in their infancy. Various versions have evolved over the years, sometimes by accident, sometimes on purpose (injected humour and the like).
